Première partie

Preambule

Dans le cadre de l'enseignement '4TIN401U - Réseaux Info L2' (2017 - 2018) à l'Université de Bordeaux, en semestre 4 de Licence Informatique, nous avons dut adapter le jeu *Bomberman* fait grâce à la bibliothèque Pygame en multijoueur (Description en A).

Le rendu final de fin d'année fut donc d'avoir un jeu *Bomberman* fonctionnel en langage Python, avec un rapport fait sur notre travail avant le **le vendredi 27 avril à 23h55**.

Les principaux objectifs de cet enseignement était de nous familiariser sur la mise en réseau de projets informatiques. Il nous as permis ainsi de mettre en pratique nos connaissances théorique sur le réseau, la gestion des ports logicielles, des sockets, de l'envoi et de la réception de données ainsi que de son traitement.

Les contraintes techniques étaient de le faire à l'aide d'un serveur centralisé, qui ne réalise pas d'affichage graphique, mais maintient à jour l'état courant du jeu. Seuls les clients sont en charge de l'interaction avec l'utilisateur (clavier et affichage graphique) et chaque client dispose d'une copie du modèle, qu'il doit maintenir à jour à travers des échanges réseaux avec le serveur.

En d'autres termes :

- Récupération par le client du modèle serveur à travers le réseau (map, fruits, players).
- Gestion des connexions / déconnexions des joueurs.
- Gestion des déplacements des joueurs.
- Gestion des bombes.
- Extension à de multiples joueurs.
- Gestion des erreurs (mort violente d'un client, coupure réseau).
- Ajout de bonus FUN dans le jeu, impliquant de faire du réseau.

Deuxième partie

Projet réseau

1 Méthode de travail

Pour notre méthode de travail, on s'était mis d'abord d'accord sur les protocoles réseau à utiliser et le squelette du code sur papier, puis on a travailler chacun de son coté en adaptant le code de l'autre.

Notre base de code était ainsi assez modulaire pour que l'on ai pas de de problèmes sur d'éventuelles modifications ou imprévu du code pour la suite.

2 Analyse du modèle

/**/

3 Algorithme et implémentation

- 3.1 Protocoles
- 3.2 Choix techniques
- 4 Améliorations effectues
- 4.1 Collisions sur les bombes
- 4.2 Gestion de déconnexion
- 5 Bilan et critique
