Première partie

Préambule

Dans le cadre de l'enseignement '4TIN401U - Réseaux Info L2' (2017 - 2018) à l'Université de Bordeaux, en semestre 4 de Licence Informatique, nous avons dû adapter le jeu *Bomberman* fait grâce à la bibliothèque Pygame en multijoueur (Description en A).

Le rendu final de fin d'année fut donc d'avoir un jeu *Bomberman* fonctionnel en langage Python, avec un rapport fait sur notre travail avant le **le vendredi 27 avril à 23h55**.

Le principal objectif de cet enseignement était de nous familiariser sur la mise en réseau de projets informatiques. Il nous a ainsi permis de mettre en pratique nos connaissances théoriques sur le réseau, la gestion des ports logiciels, des sockets, de l'envoi et de la réception de données ainsi que de leur traitement.

Les contraintes techniques étaient de le faire à l'aide d'un serveur centralisé, qui ne réalise pas d'affichage graphique, mais maintient à jour l'état courant du jeu. Seuls les clients sont en charge de l'interaction avec l'utilisateur (clavier et affichage graphique) et chaque client dispose d'une copie du modèle, qu'il doit maintenir à jour au travers des échanges réseaux avec le serveur.

En d'autres termes :

- Récupération par le client du modèle serveur à travers le réseau (map, fruits, players).
- Gestion des connexions / déconnexions des joueurs.
- Gestion des déplacements des joueurs.
- Gestion des bombes.
- Extension à de multiples joueurs.
- Gestion des erreurs (mort violente d'un client, coupure réseau).
- Ajout de bonus FUN dans le jeu, impliquant de faire du réseau.

Deuxième partie

Projet réseau

1 Méthode de travail

Pour notre méthode de travail, on s'est d'abord mis d'accord sur les protocoles réseau à utiliser et le squelette du code sur papier, puis on a travaillé chacun de notre côté en adaptant le code de l'autre.

Notre base de code était ainsi assez modulaire pour ne pas avoir de problèmes sur d'éventuelles modifications ou imprévus du code pour la suite.

2 Analyse du modèle

/**/

3 Algorithme et implémentation

- 3.1 Protocoles
- 3.2 Choix techniques

4 Améliorations effectuées

4.1 Collisions sur les bombes

L'un des principaux problèmes que nous avons rencontré en jouant est que les parties sont longues (il est difficile d'éliminer les autres). L'ajout de collisions avec les bombes permet de bloquer les joueurs adverses, les rendant plus simples à éliminer. Les parties sont de fait plus courtes mais avec plus d'action.

4.2 Gestion des déconnexions

5 Bilan et critique
